pay scales

Contrary to the name, this is a huge part of biology and medical research. They study microscopic organisms that can be deadly to humans such as bacteria and viruses, characterising them and developing effective treatments against diseases.

As well as bacteria, microbiologists also study:

- Viruses such as HIV
- Fungal infections such as athlete's foot
- Parasites such as tapeworm

This research enables the patients to get the best and most up-to-date treatments

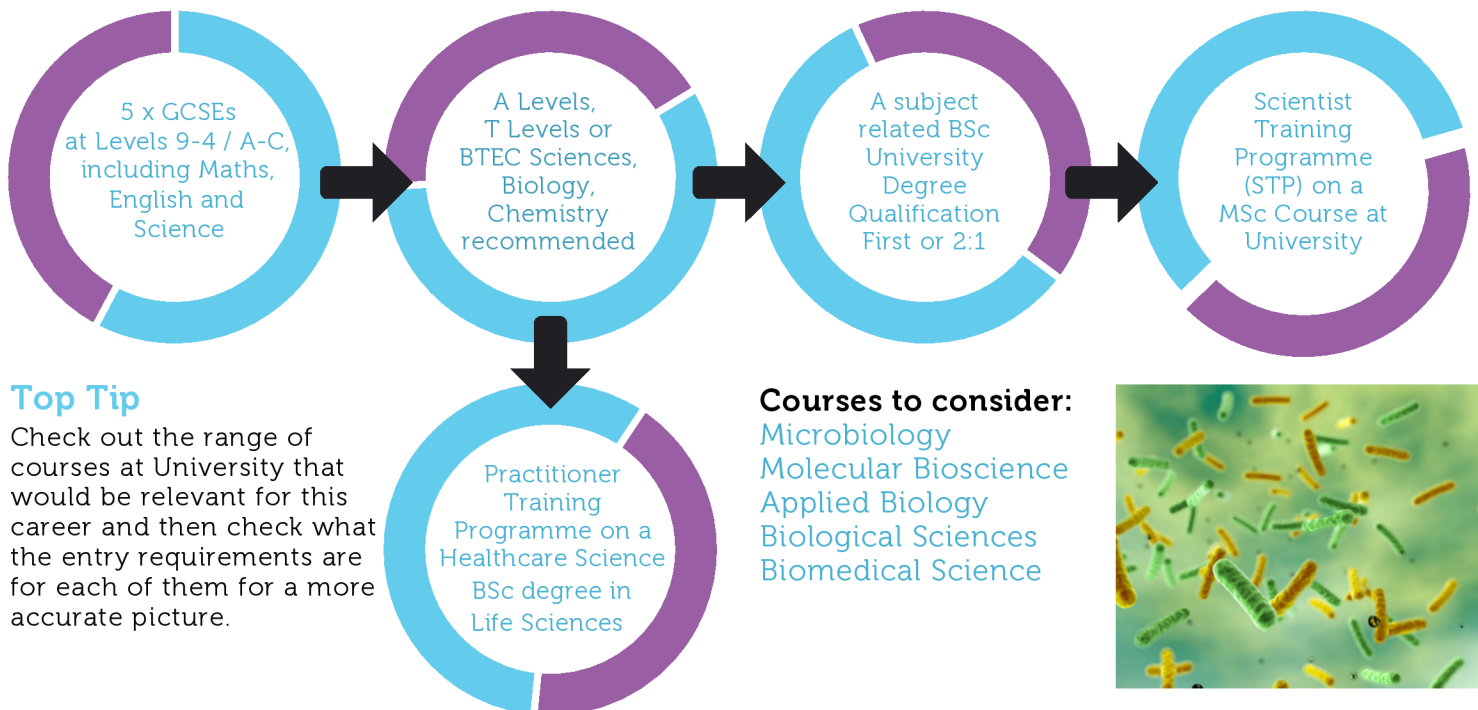

available. Not only do they get to use electron microscopes but they use the machine to the right to carry out PCR (polymer chain reaction), which enables them to take a tiny sample of DNA and multiply it!!

VIDEO

We've put a really cool video from Australia that looks at the day in the life of a microbiologist on our website. Check out www.medicalmavericks.co.uk/book if you want to watch it!
